How can nature benefit my mental health?

Spending time in green space or bringing nature into your everyday life can benefit both your mental and physical wellbeing. For example, doing things like growing food or flowers, exercising outdoors or being around animals can have lots of positive effects. It can:

- improve your mood
- reduce feelings of stress or anger
- help you take time out and feel more relaxed
- improve your physical health
- improve your confidence and self-esteem
- help you be more active
- help you make new connections
- provide peer support.

“Nurturing something else into life has really helped my wellbeing – gently caring for something helped me learn to care for myself.”

We all have different experiences of nature, and different reasons for wanting to connect with it more – or feeling unsure about whether to try. You might find you get something completely different from one activity compared to someone else.

Our pages on ideas to try in nature and overcoming barriers give lots of tips on how to bring some benefits from nature into your life, whatever your personal situation.

“I’ve been getting out into nature and walking, either on my own or with dogs, to manage my bipolar disorder for years. It helps to keep me calm and physically healthy, and I love taking the time to be mindful of all the beautiful green spaces around me, even when living in a city. Watching the birds and squirrels always has a calming effect and takes me out of my own head.”

Nature and mental health problems

Spending time in nature has been found to help with mental health problems including anxiety and depression. For example, research into ecotherapy (a type of formal treatment which involves doing activities outside in nature) has shown it can help with mild to moderate depression. This might be due to combining regular physical activity and social contact with being outside in nature.

Being outside in natural light can also be helpful if you experience seasonal affective disorder (SAD), a type of depression that affects people during particular seasons or times of year. And people tell us that getting into nature has helped them with many other types of mental health problems.
“I’ve had mild to moderate problems with anxiety, depression and OCD all my life, and in recent years volunteering on my local city farm has been the most therapeutic thing I’ve ever done, besides good talking therapy.”

“It is hard to explain the power of nature in relieving both my physical and mental stress ... There is little more relaxing then sitting with a cup of tea looking at a hill through a window and hearing the nearby stream trickle away. There is something about the quiet calm of nature that is contagious, leaving a quiet calm in my mind.”

What nature ideas could I try?

This page has some tips and suggestions for enjoying nature:

- grow or pick food
- bring nature inside
- do activities outdoors
- help the environment
- connect with animals

Don't worry if some ideas don't feel right for you – see if you can find some that do, or adapt one to suit you.

“I love watching the garden change, the difference I make when I dig a bed, plant something or even cut the grass... and honestly I am no gardener! An easy way for everyone to connect with outside is to watch the birds – put a bird feeder to attract them. Otherwise just get outside, blow the cobwebs away, breathe deeply... bliss.”

Grow or pick food

- Create a growing space. If you don’t have access to a garden, you could plant salad leaves or herbs in a window box or plant pot.

- Plant vegetables in your garden. (The Carry on Gardening and Thrive websites have information to help you get started.)

- Grow food together with others. Apply to share an allotment, or look for community gardens or food growing projects in your local area. (See the National Allotment Society and Federation of City Farms and Community Gardens websites for more information.)
• **Go fruit picking.** Look for local farms or orchards that let you pick fruit to buy. You might also find fruit growing in urban spaces, for example wild blackberries.

• **Learn to find edible plants,** also known as food foraging. You could see if a foraging group meets in your local area. (The Woodland Trust website has more information on foraging.)

Quick tip: if you’re going fruit picking or foraging, be aware that not all wild plants are safe to eat. Before eating something you've picked yourself, make sure you know exactly what it is.

“I very much enjoy being part of a community garden. It gives me a regular weekly time to devote to being outdoors, to work alongside people of lots of different ages and nationalities and teaches me a range of new skills and techniques. It is fantastic to work as part of a larger group, to see positive results in terms of seed and plant growth and harvest and to feel part of the natural cycle of life and see biodiversity at work.”

“I started out by just finding an empty and unused space in the garden outside my window and tending to it.”

**Bring nature inside**

• **Buy flowers or potted plants for your home.**

• **Collect natural materials,** for example leaves, flowers, feathers, tree bark or seeds – use them to decorate your living space or in art projects.

• **Arrange a comfortable space to sit,** for example by a window where you can look out over a view of trees or the sky.

• **Grow plants or flowers on windowsills.** (See the Royal Horticultural Society website for tips on planting seeds indoors.)

• **Take photos of your favourite places in nature.** Use them as backgrounds on a mobile phone or computer screen, or print and put them up on your walls.

• **Listen to natural sounds,** like recordings or apps that play birdsong, ocean waves or rainfall.

Quick tip: save glass jars and use them to make mini gardens (also known as terrariums), using plants, soil, stones and anything else you’d like to include. Some people like to add seashells, or plastic toys or figurines.

“I use photography as a creative outlet to express myself and support my health and wellbeing ... It helps you to really see, to be mindful in the moment and rediscover the beauty in your own surroundings. For..."
example, noticing and capturing the resilience of a flower growing with determination though a crack in concrete, or capturing the beauty of raindrop patterns and formulations. The process of observing the outside world breaks the cycle of being caught up with negative internal dialogue.”

**Do activities outdoors**

- **Take a walk in green space**, such as a local park.
- **Get creative.** Draw or paint animals or nature scenes, or let them inspire a poem or song lyrics. If you enjoy writing in a journal, try doing this outside.
- **Eat meals outdoors.** Have a picnic in a local park, or simply sit in a garden. This might be something you could enjoy doing with other people.
- **Watch the stars.** Use a stargazing website, app or book to help you recognise different stars, or simply enjoy looking at the night sky. Give your eyes time to adjust, as it can take about 20 minutes before you can fully see stars in the dark.
- **Try exercising outside.** Run or jog through a local park, or do yoga outdoors. You could try it by yourself, or look for classes in your local area.
- **Join a local walking or rambling group.** (See the Walking For Health, Let’s Walk Cymru and Ramblers websites for more information.)
- **Follow a woodland trail.** (See the Forestry Commission England and Natural Resources Wales (Cyfoeth Naturiol) websites to look for woodland near you.)
- **Go beachcombing.** Visit the seaside and search the shoreline for interesting things.
- **Try geocaching.** Geocaching involves looking for items in hidden outdoor locations, using a device such as a mobile phone or tablet. (The National Trust website has more information on geocaching.)
- **Be mindful in nature.** Find things to see, hear, taste, smell and touch, like grass under your feet or the feeling of wind and sunlight. You could also listen to recordings of mindfulness exercises. (Our pages on mindfulness and taking a mindful moment in nature have more information.)

**Quick tip:** if you’re going out on your own for longer than you usually would, or walking somewhere you don’t know well, plan ahead and remember to keep your safety in mind. If you can, let someone know where you’re going and for how long, and take your phone with you (making sure it’s fully charged).

“Hill walking and camping help to keep depression and anxiety at bay for my partner, as does trekking and gentle hill walking for me. When you are in nature only the real stuff matters (staying warm, staying fed, staying watered, and knowing where you are) … your mind is
free of the daily stresses and you can spend your time being in the moment instead.”

Help the environment

- **Go on a litter picking walk**, for example, in the park or on the beach.
- **Volunteer for a conservation project.** (The Groundwork, Wildlife Trusts and The Conservation Volunteers websites have some suggestions.)
- **Plant helpful seeds**, such as berry bushes for garden birds or flowers to help bumblebees. (See the Bumblebee Conservation Trust website for more information on bumblebees.)
- **Build an animal habitat**, for example, build a hedgehog house or create a pond if you have enough space. (See the Hedgehog Street website for information on building a hedgehog house.)

“I started volunteering on Saturdays when I was in a really low frame of mind, and it really helped me recover more quickly. I work full-time in an office during the week so doing something so active in such a different environment is a lovely contrast.”

Connect with animals

- **Watch out for wildlife.** If you don’t live near open countryside, try visiting a local park to look for squirrels, fish, insects, ducks and other birds.
- **Visit a local community or city farm.** You might be able to help out by volunteering. (See the Federation of City Farms and Community Gardens websites for more information.)
- **Hang a bird feeder outside a window.** If there’s space, you could build a small wooden nesting box on a tree or under a windowsill.
- **Try birdwatching.** You don’t need any special equipment. (See the RSPB website for more information on feeding, sheltering and watching birds.)
- **Try pet-sitting or dog walking.** Offer to be a pet sitter in your local neighbourhood, volunteer to walk dogs for an animal shelter, or ask to borrow a friend’s dog for occasional evening or weekend walks.
- **Take part in a nature survey.** This might involve counting birds, animals or insects in a particular time and place, or reporting individual sightings of wildlife. (See the Big Garden Birdwatch, Bumblebee Conservation Trust and Big Butterfly Count for examples of nature surveys.)

“Being outside, feeding rabbits, talking to the donkeys, ‘socialising’ goats and looking after sick lambs is incredibly grounding, no matter
what my state of mind... being outside getting muddy in all weathers, breathing fresh air, proudly talking to visitors about the animals and being part of the seasonal cycle of a farm has been life-changing.”

Considerations before getting a pet
Many people find caring for a pet brings lots of benefits, but you need to be sure your living environment and personal circumstances are right for the animal as well as you. If you don’t own your home, it’s also important to check if you’re allowed to keep pets.
(See the RSPCA and Blue Cross websites for more information about pet care.)

“My biggest highlight from farming was probably getting to witness goat triplets being born a couple of years ago and help them feed for the first time – there’s nothing like literally witnessing the birth of new life to give you perspective and make you feel connected with something much bigger than yourself, which I find very comforting.”

How can I overcome barriers?
Many of us with mental health problems face barriers that might stop us connecting with nature. For example, you might:

- be unused to spending time in green space and find it uncomfortable or unfamiliar
- get tired easily, or have difficulty doing physical activities
- find spending time outside or around other people challenging
- be worried about costs
- feel low or unmotivated, or feel unsure if it’s the right time for you to start something new.

Here are some tips and suggestions for you to consider:

- **Start small** – for example, try spending just five minutes paying attention to nature in your everyday life, as even small amounts of time can give your wellbeing a boost. (See our information on improving your wellbeing for more tips.)

- **Do things you find relaxing** – you might like to sit under a tree, look at the stars or do mindfulness or art activities in natural surroundings. (See our pages on relaxation, mindfulness and ideas to try in nature for more tips.)

- **Ask for support** – for example, if you feel anxious in new places or social situations, you could ask someone you trust to go with you at first. If you’re joining a formal ecotherapy programme, you could ask if a staff member or group leader can meet you beforehand. (See our pages on anxiety problems for more information and support.)

- **Work with your highs and lows** – consider which times of day you feel most energised, and when you find things harder. You might want to avoid times of day when side effects of any medication you take seem to cause more problems for you.
“As someone who’s quite socially anxious, I’ve found it much easier to chat to people and make friends when you have a practical task to do together. You also share your love of nature with fellow volunteers and farmers, so you have easy common ground and there’s never pressure to chat if you don’t feel like it. I’ve got to know some of the best people I’ve ever known whilst de-lousing chickens and trimming donkey feet – this kind of work is extremely bonding.”

- **Bring nature indoors** – if going outside isn’t possible or feels difficult at the moment, you could explore ways of [bringing nature indoors](#).

- **Plan ahead** – check the weather forecast and think about any equipment you might find useful, like warm or waterproof clothing, sun protection or a map.

- **Look for free swaps or giveaways** – for example, you might be able to swap spare seeds with other gardeners at a seed-swap event.

- **Ask your local Mind** – they may be able to provide details of local ecotherapy projects or opportunities to apply for funding, for example through the [Grow Wild project](#). (Use our online search tool to find your nearest [local Mind](#).)

- **Explore our useful contacts page** – we’ve gathered together details of many different organisations who might help.

- **Don’t blame yourself if something you’ve tried doesn’t work for you.** Managing a mental health problem can be really difficult, especially when you’re not feeling well. There are many other nature ideas you could try, and other options for treatment and support – different things work for different people. (Our pages on [seeking help for a mental health problem](#) could help you explore more options.)

### Hospitals and green space

While some hospitals have gardens, these aren’t always well-maintained or available to use. If you’re staying in hospital, you could ask staff if there’s a garden you can access.

“I volunteer with a local city farm. At first I was really nervous and my anxiety was sky high but I slowly built confidence, I made friends, I learnt new skills and I thoroughly enjoyed being active and outside. Attending regularly built structure in my week and became something to look forward to. Volunteering gives my life purpose and meaning, which – whilst not being well enough to work right now – is vitally important for my recovery, as well as helping build a sense of hope for the future.”

“You don’t need to have gardening skills or knowledge to get involved in garden/horticulture projects – just a willingness to get your hands dirty is all you need for a lot of activities ... I just love weeding and shovelling compost!”
About ecotherapy programmes

- What is ecotherapy?
- What happens in ecotherapy?
- What types of ecotherapy programme are there?
- How can I get involved in a programme?

What is ecotherapy?

Ecotherapy is a formal type of therapeutic treatment which involves doing outdoor activities in nature. There isn't one single definition of ecotherapy, but it's often used to describe a regular, structured activity that:

- is led by trained professionals (sometimes therapists), who are there to support you
- focuses on doing an activity, rather than on your health
- takes place in a green environment
- is related to exploring and appreciating the natural world
- involves spending time with other people, although you can always choose to interact at your own pace.

You might do an ecotherapy programme on its own, or alongside other treatments such as talking therapies, arts and creative therapies and/or medication.

Different terms for ecotherapy

People sometimes use different words to describe ecotherapy, depending on whether the activity has an emphasis on exercise, horticulture (gardening) or therapy. Phrases you might hear include:

- green exercise
- green care
- green therapy
- horticultural therapy.

These terms are often used to describe a whole range of outdoor activities, but may also refer to a specific type of ecotherapy programme.

“Being at a supported gardening project has transformed my life and saved the life of my partner who had attempted suicide four times before she regained hope.”

What happens in ecotherapy?

Ecotherapy can take place in both rural and urban settings, including parks, gardens, farms and woodlands. It involves varying amounts of physical activity, depending on the type of programme. It can include activities that focus on:

- working in nature, such as a conservation project, gardening or farming
• **experiencing nature**, such as enjoying the views on a walk or cycling through woodland.

Some ecotherapy sessions follow a set structure, and incorporate types of *talking therapy*, such as *cognitive behavioural therapy* (CBT). Others can be more informal, or vary depending on the time of year and what work needs doing. People in the group may or may not have experience of mental health problems, but the main focus is usually working together on the shared activity.

“I do ecotherapy to get sunlight onto my skin and into my mind. It shines light through the dark fog of depression.”

**What types of ecotherapy programme are there?**

Ecotherapy programmes can involve a wide range of activities. For example:

**Adventure therapy**

Involves doing adventurous physical activities in a group, such as rafting, rock climbing or caving.

**Animal-assisted interventions**

Involves being in spaces such as farms where you come into contact with animals and spending relaxed time feeding or petting them.

**Animal-assisted therapy**

Involves building a therapeutic relationship with animals, such as horses or dogs.

**Care farming**

Therapeutic farming activities. Involves looking after farm animals, growing crops or helping to manage woodland.

Find out more from:

- [Care Farming UK](#)

**Conservation**

Sometimes called 'Green Gyms'. Combines physical exercise with protecting and caring for natural spaces.
Find out more from:

- The Conservation Volunteers (TCV)

**Green exercise therapy**

Involves doing exercise in green spaces, for example walking, running or cycling.

Find out more from:

- Walking for Health
- Let's Walk Cymru

**Nature arts and crafts**

Doing art in or with nature. Can include creating art in green space, using the environment as inspiration or using natural materials such as wood, grass or clay.

**Social and therapeutic horticulture**

Involves gardening work such as growing food in allotments or community gardens, or inside buildings like village halls or libraries. This could lead to work experience, such as selling food at a market garden, or the opportunity to gain qualifications.

Find out more from:

- Carry on Gardening
- Groundwork
- Thrive

**Wilderness therapy**

Involves spending time in the wild and doing activities together in a group, for example making shelters and hiking.

Find out more from:

- The Wilderness Foundation

“I have depression, anxiety and borderline personality disorder (BPD). Doing ecotherapy has allowed me somewhere that is my safe place, a place of my own, where I can be quiet and peaceful. The act of
Growing and caring for something else helps me to stop thinking about what is going on in my head."

How can I get involved in a programme?

If you’d like to find an ecotherapy programme in your local area, you could:

- **Explore our useful contacts page.**
- **Contact your local Mind**, and ask if they run any ecotherapy programmes you could join. (Find your nearest local Mind on our online search page.)
- **Ask your GP**. They might be able to refer you to a local programme. This is sometimes called 'social prescribing' or 'green prescribing'. (See our page on talking to your GP about your mental health for tips.)

Some ecotherapy programmes require a referral – this might need to come from your GP, or they might accept a referral from another professional you see regularly. Costs involved can vary, although some programmes are free.

**What if there isn’t a programme near me?**

If you can’t find any ecotherapy programmes in your local area, you could:

- Ask your local Mind if they are able to get funding to start one.
- Look for nature-based groups or classes, such as walking groups or community gardens. Your local library or community noticeboard might have details.
- Look for therapeutic communities in your area and see if they include ecotherapy. (For more information, see the list of providers on the Consortium of Therapeutic Communities website.)

---

**Useful contacts**
Mind’s services

- **Helplines** – all our helplines provide information and support by phone and email. Our Blue Light Infoline is just for emergency service staff, volunteers and their families.
  - Mind’s Infoline – 0300 123 3393, info@mind
  - Mind’s Legal Line – 0300 466 6463, legal@mind
  - Blue Light Infoline – 0300 363 5999, bluelightinfo@mind

- **Local Minds** – there are over 140 local Minds across England and Wales which provide services such as talking treatments, peer support, and advocacy. Find your local Mind here, and contact them directly to see how they can help.

- **Elefriends** is a supportive online community for anyone experiencing a mental health problem. See our Elefriends page for details.

Where else could I try?

**Gardening, farming and conservation**

**Care Farming UK**
carefarminguk.org
Online directory of local care farms.

**Carry on Gardening**
carryongardening.org.uk
National charity helping anyone with a disability start or continue gardening.

**The Conservation Volunteers (TCV)**
tcv.org.uk
UK conservation projects and Green Gyms.

**Federation of City Farms and Community Gardens**
farmgarden.org.uk
Information and directory of city farms that offer therapeutic gardening and farming activities.

**Grow Wild**
grouwwilduk.com (English)
grouwwilduk.com/cy (Welsh)
A national outreach initiative of the Royal Botanic Gardens, Kew, encouraging people to engage with nature and transform spaces by planting seeds.

**National Allotment Society**
nsalg.org.uk
National organisation that upholds the rights and interests of the UK’s allotment community.

**Royal Horticultural Society**
rhs.org.uk
National charity for gardening and plantlife.
Thrive
thrive.org.uk
Charity that runs gardening projects for people with mental health problems. Also runs the Carry on Gardening website.

Pets and wildlife

Blue Cross
bluecross.org.uk
Animal charity helping sick, injured and homeless pets.

Big Butterfly Count
bigbutterflycount.org
A survey of butterflies in the UK.

Bumblebee Conservation Trust
bumblebeeconservation.org
Charity aiming to protect and raise awareness of bumblebees.

Hedgehog Street
bighedgehogmap.org
Campaign to help protect hedgehogs.

Royal Society for the Prevention of Cruelty to Animals (RSPCA)
rspca.org.uk
Animal charity working to prevent cruelty and promote kindness to animals in England and Wales.

Royal Society for the Protection of Birds (RSPB)
rspb.org.uk
Campaigning and conservation projects to protect wildlife and restore habitats.

Places to explore

Canal and River Trust
canalrivertrust.org.uk (English)
canalrivertrust.org.uk/cymraeg (Welsh)
Looks after canals, rivers and locks in England and Wales.

Forestry Commission England
forestry.gov.uk/england
Works to protect England's woods and forests.

National Trust
nationaltrust.org.uk
Lists walks and open gardens, parks and estates that you can visit.

Natural Resources Wales (Cyfoeth Naturiol)
naturalresourceswales.gov.uk
Oversees and protects natural sites in Wales.

Woodland Trust
naturalresourceswales.gov.uk
Protects trees and forests in the UK.

**Walking, rambling and adventuring**

*Lets Walk Cymru*
letswalkcymru.org.uk
Network of health-walk schemes in Wales.

*Ramblers*
ramblers.org.uk
Charity whose goal is to protect people’s ability to enjoy being outdoors on foot.

*Walking for Health*
walkingforhealth.org.uk
Network of health-walk schemes in England.

*Wilderness Foundation*
wildernessfoundation.org.uk
Offers facilitated courses in wilderness therapy.

**Volunteering**

*Do-it*
do-it.org
National database of volunteering opportunities locally around the UK. Lists all kinds of volunteering work, including nature-related opportunities.

*Groundwork*
groundwork.org.uk
National charity which offers environmental volunteering opportunities to improve local communities.

*The Wildlife Trusts*
wildlifetrusts.org
Organisation made up of local membership groups which care for nature sites.
